@Izeli, Renan	Governance			renan.izeli@ab-inbev.com

Step	Instructions	Commands	Additional Notes
------	--------------	----------	------------------

IDENTIFICATION

At first we need to check if the table is already been shared

So the table we are looking for is nickel.redeemable_categorization.

Go to Catalog Explorer, than go to Share dropdown menu, and then “View all Shares”.

As we saw in the instructions, the user is trying to see data for CA (bees_ca catalog) if the share exists it will be inside unified_share_naz (unified shared with brewdat for North America Zone). As we can see the table is available at delta share.

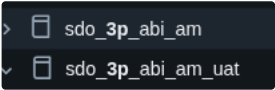

If the table is not in the delta share, the requester will need to request sharing using the form: [Unity Catalog - External Sharing](#)

[g](#)

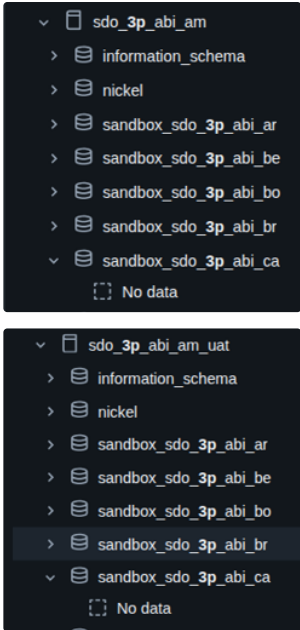

DELIBERATION

If the author is already in the zone but still can't see it like in this case, probably the author have 3p permissions and is trying to see 1p data,

If it's the case, we can check if the table is share into 3p catalog. There are 2 3p catalog, sdo_3p_abi_am and another one sdo_3p_abi_am_uat.

In this scenario we don't have any table into those catalogs

			
RESOLUTION	The governance team are the responsables to approve the demand and to include the table into those catalogs and schema.	Because Data Governance team don't purse a ticket board, we should to redirect the author directly for the team. In any situation similar to this the requester need to send a email to a Governance Team member like renan.izeli@ab-inbev.com JUAN.RODRIGUEZL@ab-inbev.com
